Title : Organs of Some Animals.  
Orig Pub : Veterinarstvi, 1958, 8, No 1, 14-15

Abstract : To sexually mature male rats, rabbits and guinea pigs  
5-15 mg/kg CdCl<sub>2</sub> was introduced subcutaneously. In all  
animals, the weight of testes decreased, as well as the  
weight of prostate and seminal vesicles. Microscopical-  
ly, the picture of necrosis of testes was discovered.  
In some animals, in the region adjoining the tunica  
albuginea regions of granulations and regeneration of  
interstitial cells was discovered. In some sexually  
immature rabbits, there were no such changes. In 13  
male Leghorns, which received, aside from CdCl<sub>2</sub>, CdBr

CA

Theory of  $D$ , for atomic diffusion in metals. Clarence Zener (Univ. of Chicago). *J. Applied Phys.* 22: 372-8 (1951).—The theory of the entropy of activation  $\Delta S$  previously given (*C.A.* 44, 14i) for interstitial diffusion in metals is extended to self- and to chem. diffusion. This entropy of activation will always be pos.; in the cases of self-diffusion and of chem. diffusion at very low concns., the better the empirical  $\Delta S$  the better does it correlate with the

in the usual solvents. The variety of forms of red P is explained by different degrees of polymerization, and different terminal groups. The latter are always impurities, and consequently, red P is never a pure substance. An attempt to replace the halogen in Schenck's red P by org. radicals, through reaction with MeMgI or ZnEt<sub>2</sub>, was unsuccessful. For results were obtained in expts. of copolymerization of white P, in satd. solns. in the corresponding alkyl or aryl halide; the solubilities, at 27°, were detd. to: in EtI 6.2, BuI 4.1, AmI 2.4, PhI 3, PhBr and PhCl 1.9%. The satd. solns. were dried with P<sub>2</sub>O<sub>5</sub> and sealed in glass tubes under N<sub>2</sub>. Irradiation with a Hg lamp for 200-300 hrs. gave ppt. of red P, which were extd. with C<sub>6</sub>H<sub>6</sub>, then with CS<sub>2</sub>, and finally with Et<sub>2</sub>O, dried over concd. H<sub>2</sub>SO<sub>4</sub>, and analyzed for P, C, and halogen. The data (amt. of solvent, g.; amt. of white P, g.; yield of red P, g.; content (%) of P, I, C) are: in EtI, 200, 16.0, 7.2, 72.4, 9.4, 1.72; in BuI, 145, 6.0, 7.0, 82.8, 200, 16.0, 7.2, 72.4, 9.4, 1.72; in AmI, 220, 7.4, 8.0, —, 8.3, 3.44; in PhI, 9.1, 3.58; in AmI, 220, 7.4, 8.0, —, 8.3, 3.44; in PhBr, 103, 2.0, 0.5, —, 177, 8.7, 6.0, 78.4, 5.6, 5.54; in PhCl, 104, 2.5, 0.1, —, 5.12; in PhCl, 104, 2.5, 0.1, —, —. All products were amorphous and insol. in any solvent. On boiling in H<sub>2</sub>O, the hydrohalic acid is given up, and the residual red P is halogen-free but not Cl-free. Complete hydrolysis is attained in 1.4 hrs. boiling. Oxidation with HNO<sub>3</sub> yields the corresponding alkyl (or aryl) phosphinic acids; of these, AtOP(Ph)<sub>2</sub> can be prep. from H<sub>2</sub>P(Ph)<sub>2</sub> owing to its sparse sol. in H<sub>2</sub>O, whereas H<sub>2</sub>P(Ph)<sub>2</sub> and H<sub>2</sub>P(Ph)<sub>2</sub> can be prep. as Ph<sub>3</sub>P. Then

AUTHORS: Popov, O. V. and Zenevich, A. F.

TITLE: Change of the dynamic signal range in the SSB modulation

PERIODICAL: Referativnyy zhurnal, Avtomatika i radioelektronika, no. 1, 1962, abstract 1-8-9 r (Sb. tr. Nauchno-tekhn. o-vo radiotekhn. i elektrosvyazi im. A. S. Popova, 1960, no. 1, 27-32)

TEXT: It is shown that the dynamic range (DR) of the signal (S), obtained as a result of a SSB modulation, may in some cases exceed considerably the DR of the immodulated signal. The increase of DR depends on the shape of the modulating signal. Signals exist at which, owing to the SSB modulation, their DR increases considerably as e.g. in the case of a rectangular S. Because of this the capacity of channels, handling the SSB modulated S should exceed that of the modulating S. This should be especially taken care of in case of transmission of nearly rectangular S. Amplitude limi-

TITLE: Carborundum tips with nitride bond for immersible thermocouples

PERIODICAL: Stal', no. 3, 1962, 237

TEXT: Silicium-nitride bonded carborundum materials have a heat resistance of up to 1,800°C, a low heat expansion coefficient  $[(3.25 \div 4.69)10^{-6}, 1/\text{degree}]$  and sufficient heat conductivity (14.4 cal/m·hour·°C). This makes them suitable for thermocouple tips. The charge for the tips consisted of 60% carborundum, 25% silicium, 15% clay, crushed to a grain size of less than 60  $\mu$ . The tips (70 - 80 mm long, with an internal diameter of 8 mm and a wall-thickness of 2 mm) were produced by pressing and casting. After drying in air and in a desiccator, they were roasted in a nitrogen current, the temperature being raised to 1,600°C, within 3 - 4 hours, with 30-minute holding at this temperature. The tips were tested under laboratory and plant conditions. 10 tips tested in steel of 1,550 - 1,600°C stood 20 - 30 immersions, after which they did not show even traces of metal or slag on them. In an induction furnace 10 tips were tested; two withstood 40 immersions; in an industrial-scale arc furnace 5 tips were immersed

Card 1/2

Carborundum tips with...

S/133/62/000/003/002/008  
A054/A127

10 - 15 times. (In both furnaces the tests had to be stopped for technological reasons and not on account of the inadequacy of the tips). On 5 tips, tried 15 - 20 times in an open-hearth furnace, there were no traces of slag or metal. The immersion (heating time, until 1,620°C is indicated) lasted 30 seconds. Tips of the material tested are suitable for thermocouples being used in quick and frequent temperature measurements of liquid metal. The tests were carried out with the co-operation of L. Sh. Lordkipanidze, Engineer, and T. V. Nozadze, Technician. ✓

Zenbën, O. On the existence of solutions of integro-differential equations. Doklady Akad. Nauk SSSR (N.S.) 91, 1261-1262 (1953). (Russian).  
Under the assumption  $|f(x, s)| \leq c$  ( $a \leq x \leq b$ ,  $-\infty < s < \infty$ ) and additional conditions which insure that the family  $A\varphi = f(x, \lambda \int_a^b K(x, t, \varphi(t))dt)$ ,  $\varphi \in C$ ,  $|\varphi(t)| \leq c$  is equicontinuous the author finds that the equation  $y = Ay$  and similar integro-differential equations have no more than one solution.
